SDG-Climate Facility

SDG-Climate Facility

A multi-phased program that aims at supporting countries in integrating climate measures into broader SDG affiliated policies and plans while developing national capacities in accessing climate finance towards building resilience to risks and enhancing adaptive capacities in the Arab region to climate risks and natural hazards.

The program will bring together partners from regional institutions, governments, UN, private sector, civil society and academia to develop capacities for integrating climate change into development and crisis recovery programmes and policies, and scale up climate finance to support bottom up solutions that build resilience to risks and strengthen adaptive capacities.

Objective

To enhance the capacity of regional and national institutions to effectively integrate climate change into development and crisis prevention/recovery actions, including support to scale-up climate finance for innovative local solutions with co-benefits across SDGs.

Development challenges

Human Insecurity: Rasing poverty, conflict and displacement in the Arab Region

To address the growing challenge climate change poses to SDG achievement across the region, the League of Arab States endorsed a Climate Risk Nexus framework in 2016 as a basis for joint action between participating UN agencies, LAS and regional institutions. The SDG Climate Facility helps operationalize this commitment through action at regional and country levels.
